### Abstract

In today's busy and expensive life we are in a great rush to make money. But at the end of the month we broke off. As we are unknowingly spending money on little and unwanted things. So, we have come over with the idea to track our earnings. Small Change aims to help everyone who are planning to know their expenses and save from it. Small Change is an app which users can execute in their mobile phones and update their daily expenses so that they are well known to their expenses. Here user can define their own categories for expense type like food, clothing, rent and bills where they have to enter the money that has been spent and also can add some

information in additional information to specify the expense. User can also define expense categories. User will be able to see pie chart of expense. Although this app is focused on new job holders, interns and teenagers, everyone who wants to track their expense can use this app.

## **Introduction**

Small Change is designed to keep a track of Income-Expense of a person on a day-to-day basis. This System divides the Income based on daily expenses. If you exceed day's expense, system will cut it from your income and will provide new daily expense allowed amount. If that day's expense is less, system will add it in savings. Daily expense tracking System will generate report at the end of month to show Income-Expense Curve. It will let you add the savings amount, which you had saved for some particular Festivals or days like Birthday or Anniversary. Daily Expense Tracker System is a system which will keep a track of Income-Expense of a person on a day to day basics. Small Change aims to help everyone who are

planning to know their expenses and save from it. Small Change is an android app which users can execute in their mobile phones and update their daily expenses so that they are well known to their expenses. Here user can define their own categories for expense type like food, clothing, rent and bills where they have to enter the money that has been spent and also can add some information in additional information to specify the expense. User can also define expense categories. User will be able to see pie chart of expense.

### Data.java

```
public class Data {
    private int amount;
    private String type;
    private String note;
    private String id;
    private String date;
    public Data(int amount, String type, String note, String id, String
date) {
        this.amount = amount;
        this.type = type;
        this.note = note;
        this.id = id;
        this.date = date;
    }
}
```

```

    }
    public int getAmount() {
        return amount;
    }
    public void setAmount(int amount) {
        this.amount = amount;
    }
    public String getType() {
        return type;
    }
    public void setType(String type) {
        this.type = type;
    }
    public String getNote() {
        return note;
    }
    public void setNote(String note) {
        this.note = note;
    }

    public String getId() {
        return id;
    }

    public void setId(String id) {
        this.id = id;
    }

    public String getDate() {
        return date;
    }

    public void setDate(String date) {
        this.date = date;
    }

    public Data() {

    }
}

```

### User.java

```

public class User {
    public String id;
    public String username;
    /*public int userImg;*/

    public User(String id, String username) {
        this.id = id;
        this.username = username;
    }

    public User() {

    }

    public String getId() {
        return id;
    }
}

```

```

    }

    public void setId(String id) {
        this.id = id;
    }

    public String getUsername() {
        return username;
    }

    public void setUsername(String username) {
        this.username = username;
    }
}

```

## Screenshot

Fig 1: Splash Screen

The image shows a mobile application interface for 'mail Change'. At the top, there is a status bar with the time 5:13:00, battery level at 29%, and network status. Below the status bar is a purple header with the 'mail Change' logo, which consists of a stylized white 'S' with a dollar sign inside. Below the header, there are two buttons: 'Sign In' and 'Sign Up'. The 'Sign Up' button is highlighted with a white underline. Below these buttons are three input fields: 'E-mail', 'Username', and 'Password'. Each input field has a light purple border and a light purple background. Below the input fields is a large purple button with the text 'SIGN UP' in white capital letters. At the bottom of the screen, there is a light gray bar with a horizontal line in the center, indicating a home indicator.

Fig 2 : SignUp Screen

The image shows a mobile application interface for 'mall Change'. At the top, a purple header contains the app's logo, which is a stylized white 'S' with a dollar sign inside, followed by the text 'mall Change' in white. Below the header is a light purple bar with two buttons: 'Sign In' (which is underlined) and 'Sign Up'. The main area of the screen is white and contains the following elements from top to bottom: a label 'E-mail' in bold purple, a rounded rectangular input field with the placeholder text 'E-mail', a label 'Password' in bold purple, another rounded rectangular input field with the placeholder text 'Password', a large purple button with the text 'SIGN IN' in white, and a link 'Forgot Password ?' in purple. At the very bottom of the screen is a light gray bar with a horizontal line in the center, representing the home indicator for an iPhone.
